

Best District-Industry Investment Opportunities (BDIIO)

Executive Brief — Top 5 Industries for Each of Bangladesh's 64 Districts

Bottom Line

This companion to the BDIAI district-ranking report answers a different question: once a district is chosen, what should actually be built there. Every recommendation combines documented local resource fit, the district's own BDIAI infrastructure/momentum scores, and Bangladesh's official BIDA national industry priorities (19-sector FDI Heatmap, Jan 2025), with named risk factors subtracted where specifically documented. RMG dominates the established Dhaka-Chattogram corridor; Agro-Processing is the most common national #1 recommendation; and resource clusters are sharply visible — shrimp in Khulna/Bagerhat/Satkhira, tea in Sylhet division, major new energy infrastructure in Pabna/Patuakhali/Cox's Bazar/Dinajpur/Rangamati.

Top 10 Opportunities Nationally

#	District	Industry	Score
1	Chattogram	Core Apparel / RMG	86.3
2	Feni	Core Apparel / RMG	86.3
3	Dhaka	Core Apparel / RMG	85.8
4	Gazipur	Core Apparel / RMG	85.8
5	Chattogram	Logistics & Port-Linked Services	82.3
6	Dhaka	Pharmaceuticals (without API)	81.8
7	Gazipur	Advanced Textiles	81.8
8	Cox's Bazar	Renewable / Power Generation	81.8
9	Jashore	IT-Enabled Services	81.3
10	Narayanganj	Core Apparel / RMG	79.8

Key Cluster Themes

Aquaculture cluster: Khulna, Bagerhat, Satkhira together hold the large majority of national shrimp culture area — treat as one regional opportunity. Tea cluster: Sylhet division produces 70%+ of national tea, centered on Moulvibazar (\$818M in committed EZ investment). Energy cluster: Pabna (nuclear), Patuakhali & Cox's Bazar (Payra/Matarbari coal-LNG), Dinajpur (coal), Rangamati (hydro) — genuinely major, often globally-notable power infrastructure investable in its own right.

Flagged Risk

Jamalpur's RMG Economic Zone has 22 signed tenant companies — real demand — but The Daily Star (Nov 2025) reports its lone active factory is crippled by a persistent power shortage deterring the rest. A narrow, specific, plausibly fast-to-fix blocker, not a demand problem.

A methodology note worth raising in the room: in 19 of 64 districts, the #1 industry has a slightly lower raw resource fit than #2, because a nationally-prioritized sector's BIDA bonus narrowly edges out a hyper-local specialty (e.g., Cox's Bazar: Renewable Energy narrowly ahead of Tourism). Both signals are shown in the full report and workbook — this is a disclosed strategic trade-off, not a modeling error. Full methodology, all 320 scored pairs, and a formula-driven workbook are in the companion 21-page report and Excel file.
