Executive Summary

This report identifies the top 5 recommended industries for investment in each of Bangladesh's 64 districts — 320 district-industry pairs in total — as a companion piece to the Bangladesh District Investment Attractiveness Index (BDIAI). Where BDIAI answers "which districts are most attractive for investment in general," this report answers "once you've picked a district, what should you actually build there."

Every recommendation rests on three inputs, combined in a single transparent formula: (1) documented local resource fit — the specific raw materials, existing industrial base, or labor specialization already present in that district, established during BDIAI's deep-research pass; (2) the district's own BDIAI infrastructure and investment-momentum scores, reused directly rather than re-estimated; and (3) Bangladesh's official national industry strategy, via the Bangladesh Investment Development Authority's (BIDA) FDI Heatmap — a 19-sector national priority taxonomy published in January 2025. A Viability Score (0-100) is computed from these three inputs, with a documented, named risk factor subtracted wherever one was found for that specific district-industry pair.

The pattern that emerges is intuitive and defensible: Ready-Made Garments (RMG) dominates the established industrial corridor (Dhaka, Gazipur, Narayanganj, Chattogram, Feni, Cumilla), Agro-Processing is the most common top recommendation nationally (appropriate for a still-largely-agrarian economy and BIDA's own top strategic priority), and resource-specific industries — shrimp aquaculture in Khulna/Bagerhat/Satkhira, tea in Sylhet division, mango in Chapainawabganj/Rajshahi, coal/gas-linked heavy industry in Dinajpur/Brahmanbaria — surface exactly where the underlying resource concentration is real and documented.

A methodological point worth flagging directly: in 19 of the 64 districts, the #1-ranked industry has a slightly lower raw resource fit than the #2-ranked one, because a nationally-prioritized sector's strategic-alignment bonus narrowly outweighs a hyper-local specialty. This is disclosed transparently rather than smoothed over in Section 2, because it reflects a genuine strategic choice — invest in what's locally strongest, or what carries national policy tailwinds — rather than a modeling flaw.

1. Objective and Scope

The objective of this report is to recommend, for each of Bangladesh's 64 districts, the five industries best suited to new investment — ranked by a transparent Viability Score rather than by qualitative impression alone. This complements BDIAI's district-level ranking with an industry-level lens: a reader can use BDIAI to choose where to invest, and this report to decide what to invest in once there.

Scope is intentionally comprehensive rather than selective: all 64 districts are covered, each with exactly 5 ranked industries, for a total of 320 scored district-industry pairs. Industries are drawn from a 26-category taxonomy combining Bangladesh's official national priority-sector list with resource-based sectors documented during prior research (see Section 2.1).

2. Methodology

2.1 Industry Taxonomy

26 industry categories are used throughout this report. 13 are drawn directly from BIDA's official FDI Heatmap (published 19 January 2025), Bangladesh's national investment-promotion agency's own priority-sector taxonomy, organized into four readiness tiers: Category A (Immediate Targets — Core Apparel, Pharmaceuticals, Agro-Processing, IT-Enabled Services, Advanced Textiles, Renewable Energy), Category B (Enable Quick Entry — Automotive Parts, Footwear, Light Engineering, Leather), Category C (Customized Deals — Logistics, Electronics Assembly), and Category D (Policy & Capacity Development — Plastics, among others not locally emphasized in this analysis).

The remaining 13 categories are resource-based or traditional sectors — Shrimp & Aquaculture Processing, Tea, Jute, Tourism, Rice & Food Milling, Sugar Refining, Gas/Coal-Linked Heavy Industry, Handloom & Traditional Textiles, Shipbuilding & River Transport, Dairy & Livestock, Freshwater Fisheries, Mango & Fruit Processing, and Forestry — included because they represent real, often dominant, economic activity documented during the BDIAI deep-research pass, even where they fall outside BIDA's FDI-specific focus.

2.2 The Viability Score Formula, in Full

For each district-industry pair, the Viability Score is:

Viability Score = (Resource Fit × 40%) + (Infrastructure Readiness × 30%) +
(Investment Momentum × 20%)

+ BIDA Strategic Alignment bonus/penalty - documented Risk

Penalty

Resource Fit (0-100) is the core driver: how directly documented local resources or existing economic activity support this specific industry in this specific district. Infrastructure Readiness is the average of that district's own BDIAI Connectivity, EPZ/Economic Zone, and Power/Gas Reliability scores — reused directly rather than re-estimated, since BDIAI already researched and verified these. Investment Momentum is the district's BDIAI Investment Momentum score. BIDA Strategic Alignment adds +8 points for Category A industries, +4 for Category B, 0 for Category C, -4 for Category D, and +2 for resource-based sectors not on BIDA's list — reflecting national policy priority, independent of any single district.

A worked example — Dhaka's #1 recommendation, Core Apparel/RMG:

Resource Fit $92 \times 40\% = 36.8$ | Infrastructure Readiness $90.0 \times 30\% = 27.0$

Investment Momentum $70 \times 20\% = 14.0$ | BIDA Category A bonus = +8.0 | Risk
Penalty = 0

Viability Score = $36.8 + 27.0 + 14.0 + 8.0 - 0 = 85.8$

2.3 Risk Penalties

A risk penalty (up to 20 points) is subtracted only where a specific, named, sourced constraint was documented for that exact district-industry pair — for example, Jamalpur's Economic Zone, which The Daily Star (November 2025) reported as crippled by a persistent power shortage despite 22 signed tenant companies. This is never a generic pessimism adjustment; all 17 applied penalties are logged with their source in the companion workbook's "Risk Notes" tab and in Section 6 of this report.

2.4 A Disclosed Modeling Tension: Local Specialty vs. National Priority

In 19 of the 64 districts, the #1-ranked industry by final score has a lower raw Resource Fit than the #2-ranked industry, because the BIDA Strategic Alignment bonus for a nationally-prioritized sector narrowly outweighs a hyper-local specialty's stronger resource fit. Cox's Bazar is a clear example: Tourism has the strongest documented resource fit (the district's globally-known defining industry), but Renewable/Power Generation — reflecting the genuinely major Matarbari LNG and coal power complex under development there — carries BIDA's Category A bonus and edges narrowly ahead. Both signals are shown side-by-side in the Appendix and the companion workbook, deliberately, so a reader can weigh local specialization against national policy tailwinds independently rather than have the model silently pick one.

3. Top 30 Opportunities Nationally

The 30 highest-scoring district-industry pairs across the entire country, regardless of division.

#	District	Industry	BIDA Cat.	Score
1	Chattogram	Core Apparel / RMG	A	86.3
2	Feni	Core Apparel / RMG	A	86.3
3	Dhaka	Core Apparel / RMG	A	85.8
4	Gazipur	Core Apparel / RMG	A	85.8
5	Chattogram	Logistics & Port-Linked Services	C	82.3
6	Dhaka	Pharmaceuticals (without API)	A	81.8
7	Gazipur	Advanced Textiles	A	81.8
8	Cox's Bazar	Renewable / Power Generation	A	81.8
9	Jashore	IT-Enabled Services	A	81.3
10	Narayanganj	Core Apparel / RMG	A	79.8
11	Chattogram	Pharmaceuticals (without API)	A	78.7
12	Cumilla	Core Apparel / RMG	A	78.3
13	Feni	Light Engineering	B	78.3
14	Mymensingh	Agro-Processing	A	78.3
15	Dhaka	IT-Enabled Services	A	77.8
16	Jashore	Core Apparel / RMG	A	77.3
17	Patuakhali	Renewable / Power Generation	A	77.2
18	Pabna	Renewable / Power Generation	A	76.6
19	Chattogram	Shipbuilding & River Transport	R	76.3
20	Munshiganj	Automotive Parts & Assembly	B	75.8
21	Munshiganj	Agro-Processing	A	75.8
22	Cox's Bazar	Tourism & Hospitality	R	74.8

4. Division-by-Division Highlights

Dhaka Division

The core RMG/textile corridor (Dhaka, Gazipur, Narayanganj) sits alongside a genuinely diverse secondary tier — automotive (Munshiganj's Honda plant), handloom heritage (Narsingdi, Tangail), and a growing agro-processing base across the division's more rural districts (Gopalganj, Madaripur, Rajbari).

District	#1 Recommended Industry	Score	BDIAI Rank
Dhaka	Core Apparel / RMG	85.8	1 of 64
Gazipur	Core Apparel / RMG	85.8	3 of 64
Narayanganj	Core Apparel / RMG	79.8	4 of 64
Munshiganj	Automotive Parts & Assembly	75.8	10 of 64
Shariatpur	Agro-Processing	69.5	27 of 64
Narsingdi	Core Apparel / RMG	67.8	14 of 64
Faridpur	Jute & Jute Diversification	65.8	17 of 64
Manikganj	Agro-Processing	63.2	35 of 64
Kishoreganj	Automotive Parts & Assembly	62.4	36 of 64
Madaripur	Agro-Processing	62.1	34 of 64
Tangail	Handloom & Traditional Textiles	61.8	23 of 64
Gopalganj	Agro-Processing	60.0	45 of 64
Rajbari	Jute & Jute Diversification	54.3	46 of 64

Chattogram Division

Chattogram district itself leads on port-linked logistics and RMG; Cox's Bazar and Patuakhali (Barisal division, but functionally part of the same coastal energy corridor) both show major renewable/power opportunities from the Matarbari and Payra complexes. Brahmanbaria's gas assets and the Chittagong Hill Tracts' tourism potential round out a genuinely varied division.

District	#1 Recommended Industry	Score	BDIAI Rank
Chattogram	Core Apparel / RMG	86.3	2 of 64
Feni	Core Apparel / RMG	86.3	5 of 64

District	#1 Recommended Industry	Score	BDIAI Rank
Cox's Bazar	Renewable / Power Generation	81.8	8 of 64
Cumilla	Core Apparel / RMG	78.3	6 of 64
Brahmanbaria	Agro-Processing	67.8	15 of 64
Lakshmipur	Agro-Processing	61.9	38 of 64
Noakhali	Agro-Processing	61.2	37 of 64
Chandpur	Freshwater Fisheries	58.1	31 of 64
Khagrachhari	Agro-Processing	51.8	63 of 64
Rangamati	Renewable / Power Generation	51.6	60 of 64
Bandarban	Agro-Processing	50.0	64 of 64

Rajshahi Division

A strong agro-processing and food-milling division (Naogaon's rice mills, Joypurhat and Natore's sugar refining), with Pabna standing out sharply for renewable energy given the Rooppur Nuclear Power Plant, and Rajshahi district itself carrying real (if underexploited) handloom silk heritage.

District	#1 Recommended Industry	Score	BDIAI Rank
Pabna	Renewable / Power Generation	76.6	13 of 64
Sirajganj	Core Apparel / RMG	70.5	24 of 64
Bogura	Agro-Processing	69.3	18 of 64
Natore	Agro-Processing	59.3	30 of 64
Joypurhat	Agro-Processing	58.7	32 of 64
Rajshahi	Handloom & Traditional Textiles	57.8	26 of 64
Naogaon	Agro-Processing	55.7	42 of 64
Chapainawabganj	Agro-Processing	54.5	47 of 64

Khulna Division

The country's aquaculture center — Khulna, Bagerhat, and Satkhira together account for the large majority of Bangladesh's shrimp culture area — alongside Jashore's distinctive IT-enabled-services strength from its Software Technology Park and Kushtia's major power-generation base.

District	#1 Recommended Industry	Score	BDIAI Rank
Jashore	IT-Enabled Services	81.3	7 of 64
Kushtia	Renewable / Power Generation	67.5	22 of 64
Khulna	Jute & Jute Diversification	65.8	9 of 64
Magura	Agro-Processing	58.7	49 of 64
Meherpur	Agro-Processing	57.9	51 of 64

District	#1 Recommended Industry	Score	BDIAI Rank
Bagerhat	Shrimp & Aquaculture Processing	57.6	25 of 64
Narail	Agro-Processing	57.3	54 of 64
Chuadanga	Agro-Processing	57.2	40 of 64
Jhenaidah	Advanced Textiles	55.7	44 of 64
Satkhira	Shrimp & Aquaculture Processing	55.3	41 of 64

Barisal Division

A fisheries- and agriculture-dominated division with one standout: Patuakhali's Payra power/port complex gives it a renewable-energy profile rivaling Cox's Bazar, while the rest of the division (Barguna, Bhola, Jhalokati, Pirojpur) centers on coastal fishing and smallholder agriculture.

District	#1 Recommended Industry	Score	BDIAI Rank
Patuakhali	Renewable / Power Generation	77.2	19 of 64
Barisal	Agro-Processing	72.3	20 of 64
Bhola	Gas/Coal-Linked Heavy Industry (fertilizer, power)	56.4	43 of 64
Jhalokati	Agro-Processing	54.3	48 of 64
Pirojpur	Agro-Processing	54.0	50 of 64
Barguna	Agro-Processing	53.0	52 of 64

Sylhet Division

Defined by two genuinely major resources: natural gas (Sylhet, Habiganj, Sunamganj) and tea (Sylhet division produces over 70% of Bangladesh's tea, concentrated in Moulvibazar). Moulvibazar's Sreehatta Economic Zone (\$818M committed) also gives it a strong RMG/textiles case.

District	#1 Recommended Industry	Score	BDIAI Rank
Moulvibazar	Core Apparel / RMG	72.0	16 of 64
Sylhet	Gas/Coal-Linked Heavy Industry (fertilizer, power)	68.3	11 of 64
Habiganj	Core Apparel / RMG	63.3	29 of 64
Sunamganj	Agro-Processing	42.6	58 of 64

Rangpur Division

Predominantly agricultural, with two clear differentiators: Dinajpur's coal fields (3 of Bangladesh's 5 discovered coalfields) support both coal-linked industry and renewable/power generation, and Nilphamari's already-operational Uttara EPZ (35,000+ jobs) makes it the division's strongest RMG case.

District	#1 Recommended Industry	Score	BDIAI Rank
Nilphamari	Core Apparel / RMG	71.7	21 of 64
Dinajpur	Renewable / Power Generation	63.7	28 of 64
Gaibandha	Agro-Processing	57.3	55 of 64
Panchagarh	Agro-Processing	56.3	59 of 64
Rangpur	Agro-Processing	55.3	33 of 64
Thakurgaon	Core Apparel / RMG	53.0	53 of 64
Lalmonirhat	Agro-Processing	46.4	61 of 64
Kurigram	Agro-Processing	46.2	62 of 64

Mymensingh Division

The smallest and most agriculturally uniform division; Mymensingh district itself has the most diversified base (agro-processing, RMG, dairy), while the other three districts (Jamalpur, Netrokona, Sherpur) lean heavily on agriculture and dairy, with Jamalpur's real but power-constrained EZ opportunity flagged as a specific case to watch (Section 6).

District	#1 Recommended Industry	Score	BDIAI Rank
Mymensingh	Agro-Processing	78.3	12 of 64
Jamalpur	Agro-Processing	62.6	39 of 64
Netrokona	Agro-Processing	58.9	56 of 64
Sherpur	Agro-Processing	58.1	57 of 64

5. Cross-Cutting Industry Themes

- RMG remains the backbone of the highest-scoring pairs nationally, but almost entirely within the established Dhaka-Chattogram industrial corridor plus Feni, Cumilla, Nilphamari, and the Sirajganj/Jamalpur/Moulvibazar Economic Zones — it is not, and should not be read as, a universal recommendation.
- Agro-Processing is the single most common #1 recommendation nationally (appropriate for a still-largely-agrarian economy, and directly aligned with BIDA's own top strategic category), but it is a broad category — the specific crop or product varies enormously by district (soybean in Lakshmipur, mango in Chapainawabganj, rice in Naogaon, potato-linked cold storage in several northern districts), and the report and Appendix should be read at that level of specificity, not as a single generic "agriculture" recommendation.
- Energy (renewable/gas/coal-linked) is the standout theme of this analysis. Five districts — Pabna (nuclear), Patuakhali and Cox's Bazar (coal/LNG at Payra and Matarbari), Rangamati (hydro), and Dinajpur (coal) — carry major, often globally-notable, power infrastructure that BDIAI's underlying research had already documented but this report surfaces explicitly as an investable industry in its own right, not just supporting infrastructure for other industries.
- Aquaculture (shrimp) is geographically concentrated and genuinely dominant in exactly three adjacent districts (Khulna, Bagerhat, Satkhira), together accounting for the large majority of national shrimp culture area — a textbook case of a cluster-based industry recommendation.

- Tea is similarly concentrated: Sylhet division alone produces over 70% of national tea output, with Moulvibazar as the clear center, reinforced by real committed Economic Zone investment (\$818M) in the same district.

6. Documented Risk Factors

17 of the 320 district-industry pairs carry a risk penalty, applied only where a specific, named, sourced constraint was documented for that exact pair — never a generic pessimism adjustment. The most significant:

- Jamalpur — Core Apparel / RMG (–15 pts): Daily Star (Nov 2025): EZ's lone active factory crippled by persistent power shortage, deterring 21 other signed companies
- Satkhira — Agro-Processing (–12 pts): Salinity intrusion directly constrains non-aquaculture agriculture
- Noakhali — Core Apparel / RMG (–10 pts): BSCIC industrial city explicitly reported as having 'failed to shine' due to gas/drainage/security issues
- Sunamganj — Agro-Processing (–10 pts): Up to 80% of territory floods seasonally (haor terrain)
- Sunamganj — Freshwater Fisheries (–10 pts): Up to 80% of territory floods seasonally; declining fish stocks documented
- Moulvibazar — Tea Processing (–8 pts): Persistent, documented labor-condition concerns for tea plantation workers; highest forest loss among comparable districts
- Kurigram — Agro-Processing (–8 pts): Independently confirmed most economically lagging district nationally (BBS 2010 lagging-districts study); weak logistics
- Lalmonirhat — Agro-Processing (–8 pts): Thinnest documentation of any district; independently flagged as 3rd most lagging nationally
- Cox's Bazar — Tourism & Hospitality (–5 pts): Sabrang Tourism Park incomplete after 8 years — execution-risk precedent in-district
- Rangamati — Renewable / Power Generation (–5 pts): Hydro asset supplies only ~5% of national demand — real but limited scale
- Rajshahi — Agro-Processing (–5 pts): District explicitly reported as lacking sufficient electricity supply despite two plants
- Natore — Sugar Refining (–5 pts): Unmet local demand for gas pipeline supply documented as a constraint
- Khulna — Shrimp & Aquaculture Processing (–5 pts): National shrimp exports fell 21% short of target in 2022-23 due to enclosure mismanagement
- Bagerhat — Shrimp & Aquaculture Processing (–5 pts): Same national shrimp-sector headwind (21% export shortfall 2022-23)
- Bhola — Freshwater Fisheries (–5 pts): Island geography raises logistics cost for processed/export goods
- Rangpur — Agro-Processing (–5 pts): Recurring major floods (1988,1998,2004,2022,2024) affect processing continuity

7. Investor and Policy Recommendations

- For an investor choosing between two closely-scored industries in the same district, prefer the one with the higher raw Resource Fit over the one boosted mainly by BIDA's national

bonus — the underlying local economic reality is a more durable advantage than a policy classification that could shift.

- Treat the three shrimp-cluster districts (Khulna, Bagerhat, Satkhira) as a single regional opportunity rather than three separate district decisions — the aquaculture supply chain, labor pool, and export infrastructure are genuinely shared across the cluster.
- Resolve Jamalpur's power-shortage bottleneck before treating its Economic Zone as investment-ready for RMG specifically — 22 companies have already signed on, so the demand case is proven; the blocker is narrow, specific, and (unlike many infrastructure gaps) plausibly fast to fix.
- For the energy-cluster districts (Pabna, Patuakhali, Cox's Bazar, Dinajpur, Rangamati), evaluate downstream/adjacent industries (light engineering, electronics assembly, cold-chain logistics) that could benefit from proximity to new baseload power, not just the power generation itself.
- Where this report's #1 recommendation differs from a district's most historically famous industry (e.g., Cox's Bazar: Renewable Energy narrowly ahead of Tourism), read both — the model surfaces genuine near-term investment opportunity, not brand recognition, and both are legitimate depending on investment horizon and objective.

8. Limitations and How to Verify Further

- Resource Fit scores are analyst judgments informed by the BDIAI deep-research pass, not a separately-audited dataset specific to this report — they should be read as a structured starting hypothesis, not a substitute for site-level due diligence or a formal feasibility study.
- The BIDA FDI Heatmap reflects national policy priority as of January 2025; sector classifications may shift with subsequent policy updates, and should be reconfirmed against BIDA's current published guidance before a binding decision.
- This report's industry recommendations were derived primarily from the existing BDIAI research corpus rather than fresh, dedicated per-industry research; where a specific industry claim needs deeper verification (e.g., exact current capacity, specific competitor landscape, regulatory requirements), the companion BDIAI Source Log and Expansion Notes name the underlying facts and sources to start from.
- Infrastructure Readiness and Investment Momentum inputs are reused directly from BDIAI, and inherit that report's own disclosed limitations — notably that power/gas reliability, banking density, and broadband/mobile coverage remain analyst estimates rather than official district-level datasets for all 64 districts.

9. Glossary of Abbreviations

Abbreviation	Meaning
BIDA	Bangladesh Investment Development Authority
FDI	Foreign Direct Investment
RMG	Ready-Made Garments
EZ / EPZ	Economic Zone / Export Processing Zone
BDIAI	Bangladesh District Investment Attractiveness Index (companion report)
BDIIO	Best District-Industry Investment

Abbreviation	Meaning
	Opportunities (this report's index)

10. Reference List

- Bangladesh Investment Development Authority (BIDA), "BIDA Unveils FDI Heatmap to Drive Targeted Investment Across 19 Sectors", investbangladesh.gov.bd, 19 January 2025 — primary source for the national industry taxonomy and category classification.
- Bangladesh District Investment Attractiveness Index (BDIAI) — companion research report and workbook by the same author; source of all district-level infrastructure, investment-momentum, and resource-fact inputs reused in this report. See BDIAI's own Source Log and Expansion Notes for full underlying citations (BBS, BEZA, BEPZA, national and local news, cross-checked encyclopedic sources).

The complete, numbered reference list is provided in the companion BDIIO workbook's "References" tab.

11. Appendix: Full 320-Row Industry Matrix

Every district's full top-5 industry list with Viability Scores, ordered by BDIAI district rank. Full component breakdown (Resource Fit, Infrastructure, Momentum, BIDA Bonus, Risk Penalty) is in the companion workbook's "Industry Matrix" tab.

District	Rank	Industry	Score
